PERSONAL STATEMENT

Final-year IT undergraduate specializing in SOC-style threat detection and network intrusion analysis, backed by hands-on experience building a MITRE ATT&CK-mapped security operations platform, a multi-protocol IDS, and a vulnerability-scanning tool. Google Cybersecurity and Cisco SOC certified. Full-stack development background (JWT auth, REST API hardening, cloud deployment) adds practical application-security depth beyond typical SOC-intern candidates.

TECHNICAL SKILLS

SOC & Threat Detection: SIEM (Splunk), IDS/IPS, Log Analysis, Alert Triage, Threat Detection & Classification, Incident Response, Threat Hunting, UEBA, MITRE ATT&CK, Sigma Rules, Anomaly Detection

Networking & Security Tools: Wireshark, Nmap, Tcpdump, Metasploit, Snort, TCP/IP, Protocol Security Analysis, Network Traffic Analysis, Vulnerability Assessment

Compliance & Governance: CIA Triad, HIPAA, Security Compliance Mapping

Programming Languages: Python, Java, JavaScript, PHP, C

Frameworks, Databases & Cloud: FastAPI, REST APIs, MongoDB, MySQL, PostgreSQL, Google Cloud Platform, Firebase

Application Security & Development: REST API Security, JWT Authentication, Git, GitHub, CI/CD

Operating Systems: Linux, Windows

EXPERIENCE

Full-Stack Developer (Intern)

Mar 2025 – Nov 2025

Willsj Technologies LLC · Bur Dubai, UAE · Remote

- Engineered JWT-based authentication and role-based access control for 4 production APIs (PHP Laravel/MySQL), reducing unauthorized-access exposure across all user-facing endpoints and sessions.
- Hardened and validated REST APIs against injection and auth-bypass issues using Postman and API Dog within a Git/GitHub CI/CD workflow, applying secure-development practices at each release.
- Deployed and monitored services on Google Cloud, gaining hands-on exposure to cloud access configuration and application-layer security controls.

PROJECTS

SOCMind AI – Explainable AI Security Operations Platform

- Built an explainable, human-in-the-loop SOC platform covering security event detection, incident correlation, attack-story reconstruction, MITRE ATT&CK mapping, and AI-assisted investigation and response.
- Authored Sigma-style detection rules and built a UEBA + event-correlation pipeline for threat hunting and forensic case management, validated across a 5-host virtual SOC lab (Windows 11/10, Ubuntu, Kali Linux, Metasploitable) simulating real attack chains.

Explainable AI-Based Model for Enhancing Healthcare Information Security

Final-Year Project

My Role: Data Transmission Security – Network Intrusion Detection (Python)

- Designed and deployed a multi-protocol IDS detecting 4 distinct attack classes (DDoS/DoS flooding, ARP-spoofing/MITM, MQTT integrity violations, BLE denial-of-service) across Wi-Fi, MQTT, and Bluetooth medical-device traffic.
- Engineered packet-level feature extractors from raw captures (dpkt/scapy), ran adversarial evasion testing, and built a compliance-aware alerting engine mapped to CIA-triad and HIPAA requirements, exposed via a FastAPI detection API and SOC-style dashboard.

DepGuard – Software Supply-Chain Security Scanner

- Built a multi-ecosystem dependency vulnerability scanner combining OSV vulnerability intelligence with behavioral heuristics to flag typosquatting, install-script risks, and package immaturity across 6 ecosystems (npm, PHP, Python, Ruby, Go, Rust).
- Designed a 0–100 Trust Score and microservice architecture (Angular, Laravel, Express) with asynchronous scanning, transitive dependency resolution, severity grading, and automated remediation recommendations.

Cybersecurity Awareness & Human Firewall Platform

- Built an adaptive security-awareness platform combining training modules, simulated phishing campaigns, and behavioral analysis to generate a 0–100 Human Firewall Risk Score per employee.
- Developed an XGBoost-based explainable risk-prediction service (Python/FastAPI) and full-stack system (Angular, Node.js/Express, PostgreSQL, Redis, Docker) with RBAC, gamification, incident reporting, analytics, and audit logging.

EDUCATION

University of Moratuwa

2022 – 2026 (Expected)

B.Sc. (Hons) in Information Technology, Faculty of Information Technology

Maliyadewa Adarsha Maha Vidyalaya, Kurunegala

G.C.E. Advanced Level (2020) – Physical Science – Combined Mathematics A | Chemistry A | Physics C

G.C.E. Ordinary Level (2016) – 8 A | 1 B

CERTIFICATIONS

- **Cybersecurity & Ethical Hacking** – Academy of Future Robotics (4-month course, Grade A+, Nov 2025). Covered vulnerability assessment, cryptography, and network security.
- **Google Cybersecurity** – Foundations of Cybersecurity, Play It Safe: Manage Security Risks, Connect and Protect: Networks and Network Security
- **Cisco** – Security Operations Center (SOC)
- **TryHackMe** – Pre Security Learning Path
