SUMMARY

Full-stack software engineer with hands-on production experience building and shipping web and mobile applications using PHP Laravel, Angular, JavaScript/TypeScript, Node.js/Express, REST APIs, and relational and NoSQL databases. Skilled across the full delivery lifecycle: frontend UI, backend API design, authentication/authorization, database architecture, automated testing, CI/CD, and cloud deployment (GCP, AWS, Docker). Brings an added security-engineering lens from independent platform projects and published IEEE research (ICITR 2024), enabling delivery of applications that are both functional and secure by design.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, PHP, Python, Java

Front-End: Angular, React, HTML5, CSS3, Bootstrap, Blade, AJAX, Responsive Web Design

Back-End: PHP Laravel, Node.js, Express.js, FastAPI, REST APIs, MVC, API Design & Integration

Databases: PostgreSQL, MySQL, MongoDB, MSSQL, Redis, Firebase Firestore, Neo4j, SQL

Testing & Quality: Pytest, Unit & Integration Testing, API Testing, Error Handling, Debugging

Cloud & DevOps: Docker, Google Cloud Platform, AWS, Firebase, Git, GitHub Actions, CI/CD, Linux

Engineering Practices: Object-Oriented Programming, RESTful & Microservices Architecture, Agile/Scrum, SDLC, Version Control, Secure Software Development

EXPERIENCE

Full-Stack Developer (Intern)

Mar 2025 – Nov 2025

Willsj Technologies LLC · Bur Dubai, UAE · Remote

- Architected and shipped REST API endpoints across 4 production Laravel/MySQL applications supporting 10k+ active users, implementing JWT authentication and role-based authorization with zero unauthorized-access incidents post-launch.
- Built and integrated responsive frontend interfaces (Blade, Bootstrap, JavaScript, AJAX, Flutter) with backend APIs across 4 application domains (marketplace, e-commerce, business directory, bidding), reducing page load times and improving mobile usability scores.
- Designed and executed automated API test suites in Postman and API Dog covering authentication, request handling, and edge-case error conditions, cutting pre-release bug escapes within a collaborative Git/GitHub workflow.
- Deployed and maintained application services on Google Cloud Platform, contributing across the full SDLC (development, integration, testing, debugging, release) and reducing average deployment turnaround.

PROJECTS

CricIntel AI – Cricket Analytics & Team Management Platform

In Development

- Developing a full-stack cricket operations and analytics platform using Laravel REST APIs, React, TypeScript, PostgreSQL, and Redis, with role-based workflows for administrators, coaches, analysts, selectors, team managers, and players.

- Designed a relational cricket domain covering organizations, clubs, teams, seasons, tournaments, players, fixtures, matches, innings, overs, and ball-by-ball deliveries to support scalable match and performance data management.
- Building modules for player management, squad selection, live match scoring, statistical analysis, training, scouting, and tactical planning, with Laravel queues and WebSockets for asynchronous and real-time features.

DepGuard – Software Supply-Chain Analysis Platform

 GitHub

- Built a multi-service full-stack platform using Angular, Laravel, Express.js, and REST APIs to analyze dependencies across 6 language ecosystems (npm, PHP, Python, Ruby, Go, Rust), including asynchronous processing and transitive dependency resolution.
- Designed an explainable Trust Scoring engine and automated remediation recommendation workflow combining external vulnerability intelligence with application-level dependency analysis.

Cybersecurity Awareness & Human Firewall Platform

 GitHub

- Developed a full-stack enterprise platform using Angular, Node.js/Express, PostgreSQL, and Redis, with a Python FastAPI analytics microservice for employee training, assessment, and risk reporting.
- Implemented JWT authentication, role-based access control, administrative dashboards, gamification, audit logging, and an explainable AI-based user-risk scoring workflow.

Artista – Digital Art Marketplace

 GitHub

- Built a full-stack digital marketplace using Angular, Express.js, MySQL, Firebase, and AWS, enabling artists to register, publish, manage, and sell 2D/3D artwork through user, catalog, and marketplace workflows.
- Contributed across frontend development, backend services, relational database design, REST API integration, and cloud components; related research was published at IEEE ICITR 2024.

EDUCATION

University of Moratuwa

2022 – 2026

B.Sc. (Hons) in Information Technology, Faculty of Information Technology

Maliyadewa Adarsha Maha Vidyalaya, Kurunegala

G.C.E. Advanced Level (2020) – Physical Science – Combined Mathematics A | Chemistry A | Physics C

G.C.E. Ordinary Level (2016) – 8 A | 1 B

CERTIFICATIONS

- **Google Cybersecurity** – Foundations of Cybersecurity, Play It Safe: Manage Security Risks, Connect and Protect: Networks and Network Security
- **Cisco** – Security Operations Center (SOC)
- **TryHackMe** – Pre Security Learning Path
